TOMITECH Website Rebuild

Product Requirements Document

Version 1.0 (Draft)

Prepared by	Inioluwa Elisha, Iniesta Automation Hub
Client	TOMITECH Compware Services Limited
Reference	tomitechservices.com (current site)

1. Overview

TOMITECH Compware Services Limited is a Lagos-based ICT company delivering IP surveillance (CCTV), video management systems, access control, and advanced network design and implementation. They partner with Cisco, Microsoft and Sophos and have delivered large projects, including a 151-camera IP surveillance system for the entire New Tejuosho Market.

The current website is built on an unmodified stock template. It hides the company's strongest credibility signals, has no clear call to action, and does not differentiate TOMITECH from any other ICT vendor. This project rebuilds the site into a conversion-focused, credible and distinctive B2B marketing site.

2. Problem Statement

Issue on current site	Business impact
Generic template look, theme marketplace links visible in footer	Looks unfinished and undermines trust
Cisco, Microsoft and Sophos logos only in footer	Strongest trust signal is never seen
151-camera New Tejuosho project shown in tiny text	Best proof of capability is lost
Portfolio has cut-off captions, low-quality photos, loud red background	Weak evidence of results
No "Request a Quote" or "Book a Site Survey" CTA	Visitors have no clear next step, so enquiries are lost
Generic copy ("Best in Class Services")	No differentiation, weak SEO
Only three services shown, uneven card heights	Understates the real range of offerings
Layout gaps and awkward block cut-offs	Feels unpolished

3. Goals and Success Metrics

Primary goal: Turn the website into a lead-generation tool that brings in qualified enquiries from businesses, markets, estates and institutions.

Goal	Metric	Target (6 months post-launch)
Increase enquiries	Quote requests and contact form submissions per month	3x current baseline
Build credibility	Share of visitors who reach partners or portfolio sections	50%+
Better engagement	Average bounce rate	Below 50%

Goal	Metric	Target (6 months post-launch)
Speed	Mobile page load time (Lighthouse)	Under 3 seconds, score 85+
Findability	Ranking for "CCTV installation Lagos", "access control Lagos", "network design Nigeria"	Page 1 for at least 3 terms

Baselines to be confirmed once analytics access is provided.

4. Target Audience

1. **Facility and operations managers** at markets, malls, hotels, hospitals and schools who need surveillance or access control.
2. **Corporate IT and procurement teams** looking for network design, security and managed ICT partners.
3. **Estate and property developers** needing CCTV and access control for residential or commercial projects.
4. **Government and institutional buyers** who need proof of past large-scale delivery.

Most visitors will arrive on mobile, often from Google search or WhatsApp referrals.

5. Scope

In scope

- Full redesign and rebrand of the public marketing site
- Content rewrite (copy, service pages, case studies)
- Quote request and contact flow with WhatsApp integration
- Basic SEO setup and analytics
- CMS so TOMITECH can update content without a developer

Out of scope (Phase 2 candidates)

- Client login portal or ticketing system
- E-commerce or online payments
- AI chatbot and lead qualification automation (recommended as an add-on)

6. Site Map

1. **Home**
2. **About Us** (story, team, values, certifications)
3. **Services:** Video Management Systems (VMS); IP Surveillance / CCTV; Access Control Systems; Advanced Network Design and Implementation; Cybersecurity (Sophos); Maintenance and Support
4. **Projects / Case Studies** (index plus individual project pages)
5. **Clientele**
6. **Partners**
7. **Contact / Request a Quote**
8. Optional: **Blog / Insights** for SEO

Final service list to be confirmed with TOMITECH.

7. Page Requirements

7.1 Home

1. **Header:** Logo, navigation, persistent "Request a Quote" button, phone number.
2. **Hero:** Specific headline (e.g. "Securing Lagos' Biggest Markets and Businesses"), one-line supporting copy, two CTAs: Request a Quote and View Our Projects. Real project photo as background.
3. **Trust strip:** Cisco, Microsoft and Sophos logos directly beneath the hero.

4. **Stats row:** Years in business, cameras installed, projects delivered, clients served (figures supplied by TOMITECH).
5. **Services overview:** Cards for each service with equal heights, short benefit-led description and a clear link.
6. **Featured project:** New Tejuosho Market, 151-camera IP surveillance. Large, prominent, with photo and short result statement.
7. **Why TOMITECH:** Four points rewritten with specifics instead of generic claims.
8. **Client logos and testimonials.**
9. **Final CTA band:** "Need a security or network solution? Get a free site survey."
10. **Footer:** Quick links, partners, contact details, social links.

7.2 Service pages

- Short intro and the problem it solves
- What is included, with typical use cases
- Relevant partner technologies
- Related project
- CTA to request a quote
- FAQ block (also supports SEO)

7.3 Projects / Case Studies

Each case study follows one format: **Client, Challenge, Solution, Result**, with 3 to 6 quality photos. Captions must display in full. Launch with at least three: New Tejuosho Market, plus two others chosen with the client.

7.4 Contact / Request a Quote

- Form fields: name, company, email, phone, service interested in, location, message
- Optional file upload for floor plans
- WhatsApp click-to-chat button
- Embedded map for the Ipaja and Yaba locations
- Click-to-call phone numbers on mobile
- Automatic email notification to the sales inbox and confirmation email to the sender

8. Functional Requirements

ID	Requirement	Priority
F1	Quote request form with validation and spam protection	Must
F2	Email notifications on form submission	Must
F3	Sticky header with persistent CTA	Must
F4	WhatsApp floating button	Must
F5	Project gallery with lightbox and full captions	Must
F6	CMS for editing pages, projects and blog	Must
F7	Google Analytics 4 and Search Console setup	Must
F8	Basic SEO: meta tags, schema markup, sitemap, clean URLs	Must
F9	Cookie notice and privacy policy	Should
F10	Blog or news section	Could
F11	AI chatbot for lead capture and FAQs	Could (Phase 2)

9. Design Requirements

- **Palette:** Keep the navy and red identity, but use red as an accent for buttons and highlights only. Remove large flat red sections.
- **Typography:** One clean heading font and one readable body font, with clear size hierarchy.
- **Imagery:** Real photos of TOMITECH engineers, installations and control rooms. Do not mix stock and real photos unless stock is clearly consistent in style. Commission or retake photos where existing ones are low quality.
- **Layout:** Consistent spacing, aligned grids, no unexplained empty bands, equal card heights.
- **Mobile first:** Designed for phones first, then scaled up.
- **Accessibility:** WCAG AA colour contrast, alt text on images, keyboard navigable.
- **Tone of voice:** Confident, plain and specific. Short sentences, concrete numbers.

10. Content Requirements

Needed from TOMITECH

- Company profile, history and year founded
- Real stats (cameras installed, projects, clients)
- Full list of services
- High-resolution project photos and, where possible, short videos
- Client list and permission to show logos
- Testimonials
- Partner certification details
- Current domain and hosting access

Delivered by us

- Rewritten site copy and microcopy
- Case study write-ups from information supplied
- SEO titles and descriptions

11. Non-Functional Requirements

- **Performance:** Lighthouse mobile score of 85+, images compressed and lazy-loaded
- **Security:** HTTPS, regular backups, updated CMS, form spam protection
- **Browser support:** Latest two versions of Chrome, Safari, Edge, Firefox
- **Responsiveness:** Fully functional from 320px up
- **Hosting:** Reliable hosting with a CDN, ideally with African edge locations
- **Data protection:** Compliance with the Nigeria Data Protection Act for form data

12. Recommended Tech Approach

Choose one, based on how often TOMITECH expects to update content:

- **Option A: WordPress with a custom theme.** Easiest for the client team to manage and widely supported.
- **Option B: Next.js with a headless CMS.** Faster and more flexible, but needs developer support for larger changes.

Either option should include a form handler, analytics and an automation hook so new leads can flow into email, WhatsApp or a CRM.

13. Timeline (Estimate)

Phase	Duration
Discovery, content collection and sitemap approval	1 week
Wireframes and design (homepage plus key templates)	1 to 2 weeks
Client review and revisions	1 week
Development and CMS setup	2 to 3 weeks
Content upload, SEO, testing	1 week
Launch and handover training	2 to 3 days

Total: about 6 to 8 weeks, depending on how fast content and feedback arrive.

14. Risks and Assumptions

Risk	Mitigation
Delay in receiving photos, stats and content	Set a content deadline and use a shared checklist
Low-quality existing project photos	Schedule a short photo shoot at an active site
Client approvals slow down the project	Agree a single decision-maker and fixed review windows
Scope creep (portal, shop, extra pages)	Hold the scope in Section 5 and treat additions as Phase 2
Permission to show client names and logos	Get written approval before publishing

Assumptions: TOMITECH owns the domain and can provide access; the company can supply accurate figures and project details; one point of contact will give consolidated feedback.

15. Open Questions

1. What is the budget range and target launch date?
2. Which services should lead on the homepage?
3. Is a full rebrand (logo, colours) wanted, or only a website redesign?
4. Which CMS does the TOMITECH team prefer, or who will manage updates?
5. Are there other major projects or certifications that should be featured?
6. Should the site include a blog from day one?

16. Approval

Role	Name	Date
Client representative		
Project lead	Inioluwa Elisha
